Lou, Charles Lindbergh's backup pilot
for
Hamilton Sundstrand Corporation
Windsor Locks, CT

Lou, who introduces himself as Charles Lindbergh's backup pilot, steps out of the pages of an open book on the desktop of a Hamilton Sundstrand engineer. He explains how he helped build Lindbergh's famous aircraft, *The Spirit of St. Louis*, which, he says, was named after him. A modern day pilot appears in the computer screen and steps out onto the desk with Lou and shows how Hamilton Sundstrand's concept of "Systems Integration" is revolutionizing the way aircraft are constructed today.

This presentation replaced a previous production that appeared at the 1997 Paris Air Show and subsequently was permanently on view in the lobby of the company's corporate headquarters. This new show was featured at the 2002 Farnborough Air Show in the UK and the 2003 Paris Air show after traveling to selected Hamilton Sundstrand facilities throughout the US.
